

Connected Mass Transit Technologies

Global Leader in 4G LTE Network Solutions

The use of wireless in mass transit fleets is growing as digital video systems, GPS, WiFi, credit card processing, and other cloud-based applications are relied upon to streamline operations and improve the customer experience. With Cradlepoint's integrated 3G/4G/LTE networking solution, bus fleets can process payments, power bus driver tablets, manage interior and exterior digital signage, as well as deliver secure, segmented passenger and driver WiFi.
