

Connected Police Technologies

Global Leader in 4G LTE Network Solutions

With 3G/4G/LTE, police vehicles can use the in-vehicle connectivity to power mission critical applications, not only for reporting, but also for body cameras, video streaming, and dashboard cameras. With ignition sensing, in-vehicle networks can run even while the vehicle is parked, creating networks that are powered by the officer's vehicle.

NetCloud MANAGER

NetCloud Manager
Centralized, intelligent cloud networking platform used for configuration, monitoring, and remote management of Cradlepoint devices

Dash Camera
Unbiased recorded account of events and real-time visual data

Dash Computer
Real-time access to the network systems (RMS & CAD) and expedites report submission

Cradlepoint Router
Cradlepoint's COR family provides rugged, reliable routing for In-Vehicle Networks

Body Camera
Continuous video documentation of incidents in the field

Wireless Tablet
Portable device used to issue citations, document evidence, and report data
